

Name of Student:	Xu Ruijing
Project Title: <i>[Project title must be unique to student]</i>	Learning Visuo-Tactile Perception for Contact-Rich Robotic Manipulation

Project Description:**Project Timeline for Completion:****Semester 1 (AY2026/2027 Semester 1):**

Conduct literature review; design and integrate the visuo-tactile data collection system; calibrate sensors; collect pilot data from household objects; and develop initial vision-only and visuo-tactile perception baselines.

Vacation Period:

Expand the dataset; refine data processing and synchronization; and train the visuo-tactile perception model.

Semester 2 (AY2026/2027 Semester 2):

Deploy the learned perception module on a real robot; conduct manipulation experiments and comparison with vision-only baselines; analyse results; and prepare the final report and presentation.
